240W Programmable IP66/IP67 Tunable White Driver

Features

- Adjust color temperature continuously
- Adjust intensity and color temperature separately
- 240W Max each channel with total 240W load
- 1% Min each channel with total 10% Min dimming
- Independent dual output channels (Optional)
- Independent dual dimming channels (Optional)
- Dim-to-Off (Optional)
- Channel 1 Power transfer (Optional)
- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) with Programmability
- Isolated 1-5V/1-10V/10V PWM/3-Timer-Modes Dimmable
- **Output Lumen Compensation**
- Input Surge Protection: DM 6kV, CM 10kV
- All-Around Protection: OVP, SCP, OTP
- IP66/IP67 (DV model)
 - IP66 and UL Dry/Damp Location (DF model)
- TYPE HL, for use in a Class I, Division 2 Hazardous (Classified) Location
- 5 Years Warranty

Description

The EUW-240DxxxDx series is a 240W, constant-current, programmable and IP66/IP67 LED driver that operates from 90-305Vac input with excellent power factor. Created to enhance tunnel, high bay, signage, or horticulture type applications by offering a simplified white color tuning solution. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, output over voltage, short circuit, and over temperature.

Models

Adjustable Output	Full-Power Current	Default Output	Input Voltage	Output Voltage	Max.	Typical Efficiency	Power	ical Factor	Model Number
Current Range	Range (1)	Current	Range(2)	Range	Power	(3)		220Vac	(5)
10.5-1400mA	1050-1400mA	1050mA	90~305 Vac/ 127~300 Vdc	80~228 Vdc	240W	94.0%	0.99	0.96	EUW-240D140Dx
45-5000mA	4500-5000mA	4500mA	90~305 Vac/ 127~300 Vdc	34~54 Vdc	240W	92.0%	0.99	0.96	EUW-240D500Dx ⁽⁴⁾

Notes: (1) Output current range with constant power at 240W

(2) Certified input voltage range: UL, FCC 100-277Vac; otherwise 100-240Vac

Tel: 86-571-56565800

- (3) Measured at 100% load and 220Vac input (see below "General Specifications" for details)
- (4) SELV Output
- (5) x = V is CCC and CE model; x = F is UL Recognized model.

240W Programmable IP66/IP67 Tunable White Driver

Notes:

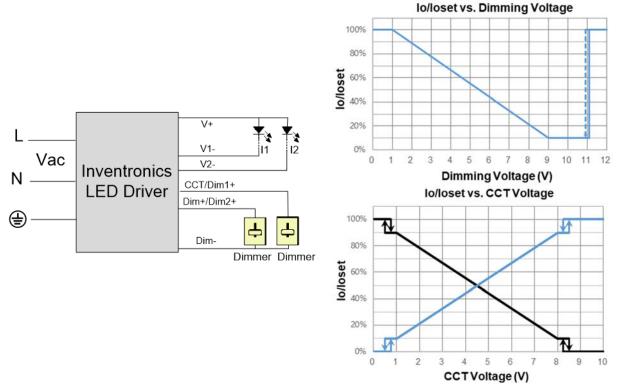

- 1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
- 2. When 10V PWM negative logic dimming mode and Dim+ is open, the driver will output maximum current.

Dim/CCT Time Dimming

Time dimming control includes 3 kinds of modes, they are Self Adapting-Midnight, Self Adapting-Percentage and Traditional Timer.

- Self Adapting-Midnight: Automatically adjusts the dimming curve based on the on-time of past two
 days (if difference <15 minutes), assuming that the center point of the dimming curve is midnight local
 time.
- **Self Adapting-Percentage**: Automatically adjusts the on-time of each step by a constant percentage = (actual on-time for the past 2 days if difference <15 min) / (programmed on-time from the dimming curve).
- Traditional Timer: Follows the programmed timing curve after power on with no changes.

Output Lumen Compensation

Output Lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

Independent Mode Dimming (Optional)

Independent mode can adjust two channels completely independent by 0-10V or 10V PWM signal.

Dimming Specifications

Parameter	Min.	Тур.	Max.	Notes
Absolute Maximum Voltage on the Vdim (+) Pin	-20 V	-	20 V	
Recommended Dimming Range for 0-10V	0 V	-	10 V	
Dim off Voltage	0.35 V	0.5 V	0.65V	Independent mode 0-10V dimming

Fax: 86-571-86601139

Specifications are subject to changes without notice.

All specifications are typical at 25 °C unless otherwise stated.

0-10V Dimming

The recommended implementation of the dimming control is provided below.

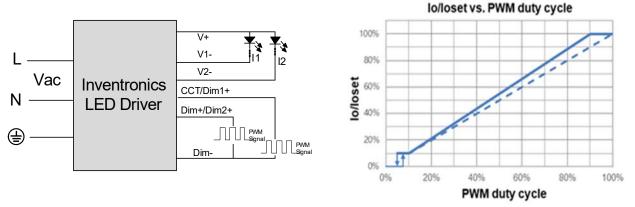

Implementation 1: Positive logic

Notes:

- 1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
- The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like zener.

10V PWM Dimming

The recommended implementation of the dimming control is provided below.

Implementation 3: Positive logic

Notes: Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.

Power transfer

This function is optional, when channel 1 is dim-to-off, part or all of its power can be transferred to channel 2 by setting Inventronics Programing software.

14/17

Specifications are subject to changes without notice.

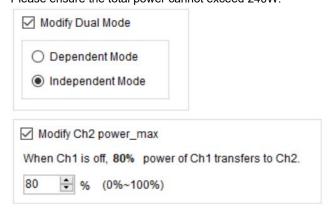

All specifications are typical at 25 °C unless otherwise stated.

Rev A

240W Programmable IP66/IP67 Tunable White Driver

For example

Select "Independent Mode", then select "Modify Ch2 power_max" if power transfer function is needed. If input 80% in the field, the I_{Ch2} value will be added by $80\%*I_{Ch1}$ current when Ch1 is dimmed to off. Please ensure the total power cannot exceed 240W.

Output Lumen Compensation

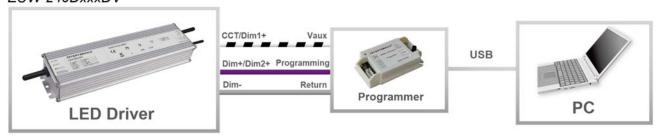

Output Lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

Maximum Dimming Level with 9V or 10V Selectable

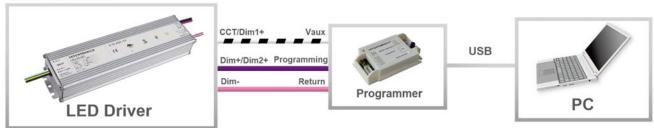

The maximum dimming level can be set as corresponding dimming voltage is 9V or 10V by Inventronics Multi Programmer,9V is default.
